Stand sign RAS

rohr+fläche... over 25 years a proven system quality as a timeless signposts generation.

rohr+fläche

Front as back!

The free-standing signs of the **rohr+fläche** system basically provide two sides for the inscription. If also the foundation-anchoring remains hidden under the surface, **rohr+fläche** signs provide the perfect solution.

03-2021 © www.meng.de

Stand sign RAS

With the broad modular system, individual solutions can also be realized.

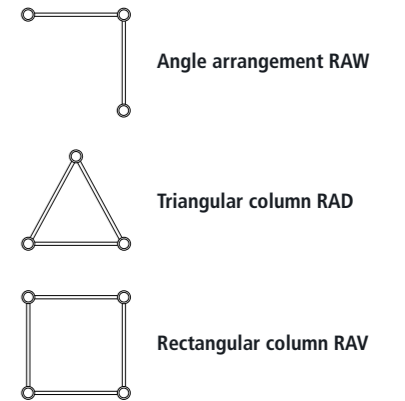

meng
signsystems

rohr+fläche

Standard RAS

With the rohr+fläche system, meng developed a classic sign, which since 1990 has been exemplary for the complete control system design. Since then, the RAS outdoor-stand has been used unchanged, but the lighting is now designed with a slim, contemporary LEDluminaire. See data sheet ...

Star signpost RARIM

Star-shaped panels pointing in 8 different directions with many design options.

rohr+fläche

Star-shaped

The star-shaped panels pointing in different directions can be individually designed in size, form and color. The thickness of the material is 4mm aluminum. Custom-made with larger surfaces, however, need 6mm thickness, or more. A compass disc shows the heavenly directions while keeping grass away.

12.2020 © www.meng.de

Star signpost RARIM

The star signposts of the pipe+surface system offer unsurpassed flexibility.

meng
signsystems

rohr+fläche

Panels

In the standard requirement, each panel receives its own mast sleeve, which can be locked independently of the other directions in 45 degree increments. Optionally, a 16-fold division can be made. Several panels at the same height would obscure the next information to the observer, especially at narrow angles. This does not make sense ergonomically. Only with opposite targets are both equally visible. Therefore, the star signpost also allows a 180 degree arrangement at the same height. Interesting is a design variant in which an opposite extension, such as a material fusion appears with coats of arms or logos for example from sponsors can be labeled.

Overviews wall mounted RU

Significant round elements characterize the consistent design of the guidance system.

rohr+fläche

The wall-mounted signposts of the **rohr+fläche** system are available in a wide range of different materials, dimensions and designs. This means that practically no situation is conceivable in which a costly custom design would be required. The surface design of the signs with lettering, signs, arrows, color and graphics can be individually adapted to the customer. The significant round elements form the recurring identity in all parts belonging to the guidance system.

The photo shows an overview with 1,500 mm height and 750 mm width.

Overviews wall mounted RU

The round profiles on the sides allow the insertion of individual surfaces.

rohr+fläche

Whether overview boards are equipped with plug-in panels or with continuous information surfaces depends on the user's needs. If replacement is not required too frequently, it makes sense to use foil texts or digital prints on a freely designable surface. This solution offers a cost advantage over individual panels. The texts can still be replaced by peeling off the foils. The sizes of the panels can be freely selected within the basic grid.

A combination of several panels next to each other or with pin/magnet surfaces is also possible. magnetic surfaces is possible. The tube profiles serve as holding rails for the surfaces. When determining the height, it must be noted that the height above or below the sign is sufficient to

push out the panels, if necessary the area must be divided. The width between the tubes should not exceed 900 mm for stability reasons. The surface height per panel should be at least half the width.

Example I

Here, three freely designable surfaces are combined with tubes of 30 mm each.

Article number:
RUH 90 30 75 5 S for back-covered acrylic panels.

Can also be equipped with a combined pin and magnetic surface.

Example II

In this overview, two freely designable surfaces are combined with tubes of 30 mm each.

Article number:
RUS 75 60 60 S for aluminum panels with additional acrylic cover.

F03

F04

F05

F06

F07

F08

F09

In addition to the costly escape route luminaires, the less expensive afterglow version is sufficient in many places if no safety lighting is available. Especially for visitor and guest areas, meng has developed a high-quality yet simple solution: Sign holders made of frosted stainless steel with laterally stable tubes (d = 8 mm) allow both wall and ceiling mounting. The suspension technique in metal grid ceilings offers the invaluable advantage that no drilling is required in the ceiling during installation. Low-reflection 1.5 mm thick acrylic discs provide exemplary protection for the photoluminescent films.

Escape signpost RFW

Convenient wall and ceiling mountings enable quick assembly.

rohr+fläche

The use of escape signposts in buildings is governed by various regulations. These specify symbolism, attachment and design. Where no illuminated version is mandatory, photoluminescent surfaces can be used. The **system rohr+fläche** allows also for these signposts a solution in continuous design. A stainless steel sign specially designed for this application can be used both as a wall-mounted version and as a single or double-sided ceiling sign.

Execution

The color design and symbolism of the escape signposts are specified in the workplace directive ASR A1.3 and in the standard DIN EN ISO 7010. They are available with differently arranged pictograms and can therefore be supplied to suit all required situations on site.

Wall signs

First, mounting plates are doweled or glued to the wall. Then the stainless steel signs with the respective pictogram are glued on.

Ceiling signs

In the ceiling-mounted version, fine brass nipples with stainless steel clamping screws are integrated in the tubes. The signs can be safely suspended using the fine steel cable (d = 1.8 mm) of the normal signposts. An M3 clamping screw fixes the sign adjustably to the suspension. Perforated covers allow easy anchoring without drilling. A 2 mm stainless steel wire is angled and hooked into the ceiling holes. The sign is then fixed to the wire rods.

Rope attachment

in plasterboard ceilings.

Wire attachment

in perforated metal ceilings.

Ceiling signs

The pictograms on the ceiling suspended double-sided escape route signs are also glued on. Material thickness 5 mm, weight 500 gr.

Signpost ceiling mounted RD

Significant round elements characterize the consistent design of the guidance system.

rohr+fläche

The ceiling mounted direction signs of the **rohr+fläche** system are available in a wide range of different materials, dimensions and designs. This means that practically no situation is conceivable in which a costly custom design would be required. The surface design of the signs with lettering, signs, arrows, color and graphics can be individually adapted to the customer. The significant round elements form the recurring identity for all parts of the signage system. The photo shows a ceiling sign with a height of 300 mm and a width of 1,200 mm.

12/2020 © www.meng.de

Signpost ceiling mounted RD

The lateral profile grooves allow the insertion of individual panel materials up to 8 mm thick.

meng
signsystems

rohr+fläche

With ceiling mounted signs, there is no need to think about dusty chains and hooks. The rope suspension system from **rohr+fläche** works with fine steel ropes and elegant, adjustable clamping bushes that can be adjusted at the push of a button. We place special emphasis on the ceiling connection: The fine cable is pressed directly into the screw, so that only the screw head with washer is visible on the ceiling. However, the system also allows other fastening options – for example, the tube can extend to the ceiling or a rigid pendulum rod can connect the signpost to the ceiling anchor. When deciding on a particular width, attention must be paid to the deflection stability of the surface material. For narrow, long signs we recommend double-walled aluminum panels.

Solid ceilings

Dowel screw with pressed-in rope for solid ceilings.

Cavity ceilings

Cavity ceiling cavity anchor with expansion device. Anchor and cable screw are equipped with M6 thread. Assembly pliers are available as an accessory.

Quick adjustment

On tension, the nipple clamps tightly around the rope. Pressing the detent button allows the shield to be aligned, adjusted in height or removed. The end of the rope disappears into the tube. This gives an elegant appearance is given.

Doorplate large RTL

Large scale door sign for administrations, schools, clinical institutions, residential care home for the elderly...

rohr+fläche

... if assignment plans, extensive information or large, well-legible lettering are required. Based on simple geometric forms, the **rohr+fläche** doorplate has become a classic. Since 1991, the original has been awarded with numerous different design awards.

09/2019 © www.meng.de

Doorplate large RTL

The large format facilitates even DIN A4 label inlays.

meng
signsystems

rohr+fläche

Doorplate large RTL

The large **rohr+fläche** door sign has a visible width of 200 mm framed by its round edge profiles. It therefore also supports paper inlays of a 210 mm width. For this variant, we also provide perforated DIN A4 for each format. Additionally, we offer a version for exchangeable modules ready for frequent exchange of uncut DIN A4 sheets. Instead of stud bolts, the latter disposes of a lower stop angle for both glass and inlays.

Installation

Raw plug installations applying counter sunk screws are common. In this case, the screws are invisibly hidden behind the label inlays. Please explicitly order a clued installation for solid even walls, as well as custom fixations such as magnets for walls and furniture made from steel. Each variant is delivered together with enclosed attachment material.

Design

The aluminium system profile is responsible for fixing an individually labelable caption inlay between a non-reflecting acrylic glass cover and a neutral back panel. A compatible system key opens the stud bolt lock.

Standard formats

Visible width	Height
200	
RTL 10 =	100
RTL 15 =	150
RTL 20 =	200
RTL 30 =	297

Article	Size	Pipe Surface	Customized Solution

The visible width of 200 mm is constant. Please enquire about stainless steel stud bolts for – rather rare – outdoor application.

Doorplate small RTS

Significant round elements characterize the consistent design of the guidance system.

rohr+fläche

Further use

In addition to the „normal“ use as a doorplate with room number, department designation and name, the sign can be equipped with pictograms or warning notices. The system profile is also used in a different configuration and height as a lift panel (see overviews) and as a table display (see variable information).

Doorplate small RTS

The round profiles on the sides allow the insertion of individual surfaces.

meng
signsystems

rohr+fläche

Dimensions

The width specifications always refer to the visible width, i.e. the area of a sign that can be used for information. The width of the side round elements must be added for the total width.

Mounting:

Fasten the mounting plate.

Push on the shield until it snaps into place.

Disassembly:

Unlock with tool.

Push up sign.

The inserts are secured against unauthorized removal at the top with 2 stud screws. Never tighten them!

Mounting

The wall mounting is usually doweled. The mounting plate can be attached in advance, and the labeled door sign is then completely clipped on. It is held and fixed securely by a special technique. It is also possible to attach the sign to smooth surfaces using adhesive tape or to steel walls using magnetic adhesion.

Fuse

The acrylic cover plate with the text sheet is secured in the profile by stud screws. A system key enables easy replacement of the information on the mounted sign. On request, we use outdoor door signs with stainless steel studs for a small extra charge.

Signs for exterior use

Our sign system quintessenz offers solutions for all customer demands

Σ quintessenz

quintessenz provides a consistent sign family fit for visual communication. It is therefore an optimal means of presenting your Corporate Design while simultaneously delivering key information on orientation and guidance to your customers.

09/2019 © www.meng.de

Signs for exterior use

Categories and varieties

meng
signsystems

Σ quintessenz

Signs for exterior use

All individual parts of our **quintessenz** system are protected against corrosion and withstand weather conditions. So do the QWA wall-mounted signs. Nonetheless, we strongly advise additional excavation support systems to prevent unauthorized removal. The sandwich-like variable constructions such as QWV, providing support for paper or transparent inlays are not water-proof. Capillary attraction may lead to intruding water which ultimately can damage your valuable inlays or the sign itself. These constructions are not suitable for permanent outdoor usage.

Cantilever and ceiling-mounted signs

applied to facades and thoroughfares are subject to considerable wind forces. For this reason overhead ceiling is not allowed for signs used outdoor.

Fixed suspensions are to be anchored to the bare floor. Especially for security reason and for accessing fire rescue paths minimum widths and heights should be consired.

Please also note that the building material's capacity and an adequate suspension has to be verified by on-site stress analyses.

This espially applies to solutions for self-supporting walls, sockets and underground garages.

In case of self-supporting standard elements a covert underfloor instalation

is assumed, implaying a different appearance of visible studs or flanges. Therefore, customized studs, or flanges, respectively, will have to be orderedseparately and subsequently added. This may cause larger efforts and potentially less appealing optics.

The installation of both interior-lit and externally illuminated versions requires special cable cands. This will be consired on site. As it may involve considerable costs, we will not undertake further steps until further notice from our clients.

Exterior pillars QA

Slim steles for significant routing

Σ quintessenz

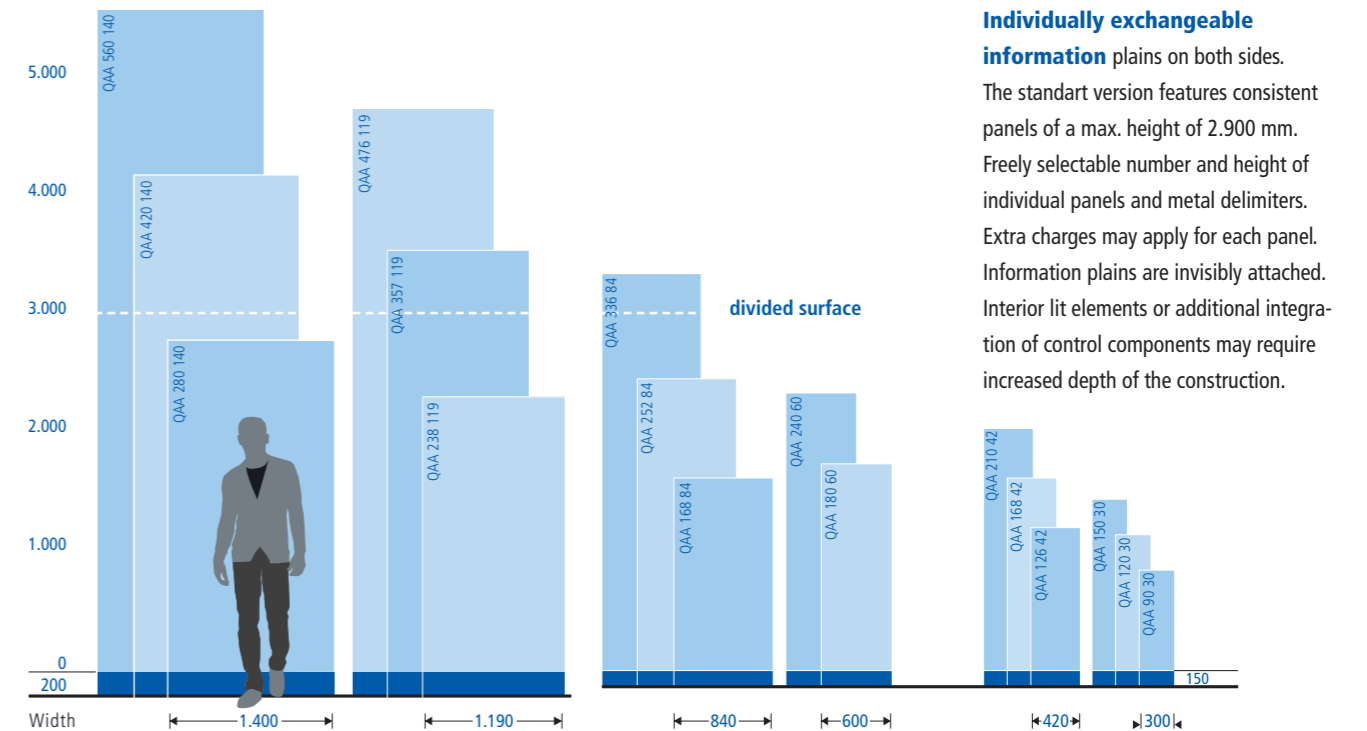

Our slim steles for exterior use are one of the most significant elements within the **quintessenz** system. Graphics and captions on visible surfaces may be freely arranged. Therefore, they are a strong visual support of your corporate design. Right picture: optional extras: elevated polished stainless steel caption.

Exterior pillars QA

Slim steles with individually exchangeable information spaces

Σ quintessenz

Individually exchangeable information plains on both sides. The standart version features consistent panels of a max. height of 2.900 mm. Freely selectable number and height of individual panels and metal delimiters. Extra charges may apply for each panel. Information plains are invisibly attached. Interior lit elements or additional integration of control components may require increased depth of the construction.

Monoliths Q60AA

Monoliths are the timelessly puristic form of conveying information.

Σ quintessenz

Monoliths

Monoliths are modern and attractive with their continuous effect of a one-piece body. The **quintessenz** of type Q 60 AA meets this requirement with successful solutions of an extensive choice of formats. All sides, both the information surfaces and the all-round slim frames with a construction depth of only 60 mm, are level and flush.

08.2020 © www.meng.de

Monoliths Q60AA

Stelae and outer columns with only 60 mm installation depth.

meng
signsystems

Σ quintessenz

Hollow body made of aluminum

Since a monolith made of solid material would not be very economical to produce, the **quintessenz** solution is manufactured as an aluminum hollow body. The forcible material edges are so close to the body that they do not interfere with the monolith's optics.

For full-surface filming with digitally printed lettering, this profile also offers optimum protection against nibbling.

In contrast to the QAA type columns, neither individually exchangeable panels nor base plates are provided as standard.

Special dimensions for 60 mm installation depth

Heights: Up to the stability limits of the inner construction the following maximum heights are possible:

For 980 width not higher than 2,980 mm

For 1,190 width not higher than 1,980 mm

For 1,440 width not higher than 1,280 mm

The widths can vary between 200 mm and 1,440 mm.

The depth cannot be changed for the 60 mm profile dimension.

Lighting

The lighting can be achieved by means of a floor mounting beam. Custom-made panels with interior lighting are also available as custom-made products.

The floor area remains approx. 300 mm without illumination.

Non-illuminated edge in mm

420er width to 1.500 mm height = 40

980er width to 2.000 mm height = 65

720er width to 2.500 mm height = 65

980er width to 2.600 mm height = 95

840er width to 2.800 mm height = 95

720er width to 3.000 mm height = 95

980er width to 2.980 mm height = 140

1.190er width to 1.980 mm height = 140

Raw layout dimensions for labeling

When dimensioning the surfaces, the inscribable net area = sheet metal dimension is always named. The external dimensions are each 4 mm wider.

When the surfaces are dimensioned, the label is always labeled Net area = sheet metal dimension. For the outer dimensions, the profile edges of 2 mm must be added to each side and top.

Larger dimensions

require stronger interior structures. With a depth of 100 mm even pylons up to 6 meters high are possible. See data sheet Q100AV. Siehe Datenblatt Q100AV.

Article description

Desk sign QAP

Panel signs in highest quality for a long life cycle.

Σ quintessenz

The desk stands of the quintessenz system offer ideal conditions for the barrier-free arrangement of tactile maps and tactile information. But they are also the solid solution for panoramic maps, which are protected behind safety glass, for public spaces.

Desk sign QAP

Compared to vertical information panels, consoles offer many advantages

Σ quintessenz

Main arguments

A desk sign informs without concealing the object of interest. A location-adapted plan is much easier to understand and to transfer to the viewer's environment. It is therefore preferable over a vertical perspective.

Barrier-free information access

Wheelchair-users and vision-impaired persons require appropriate ergonomic accessibility of information. For this reason, the front edge may not lie below 670 mm and passing under should be possible through additional space of 750 mm.

Standard format

Our desk signs have a standard height of 600 mm and a 1200 mm width respectively. A smaller version is available with measures of 500 mm and 1000 mm respectively.

The information space may either consist of a tactile relief plan or an ESG security glass protection of an 8mm strength. Also available: a metal board of aluminum. Irrespective of material, the information space is framed by justified 4mm metal edges. The completely mitted **quintessenz** profile is silver-anodized and disposes of an edge of 48 mm width.

It is mounted to two supportive columns made of galvanized steel and turned by 30° for comfortable reading. Colouring is available for all individual pieces of the product. The exchangeable reading console may be secured against unauthorized removal by hidden locks.

Stand sign QASA

Low/mid sized signs with quadriatic profile

Σ quintessenz

Exemplary application

Communication of supplementary/secondary information, which does not require a steele of excessive height.

Installation

- A** Flanges for installation both onto solid foundations and ceilings.
- B** Concrete tampered foundation for direct ground insertion.
- C** As B, however, such as A additionally flanges have to be inserted to foundations for hardening prior to the sign installation.

Frame profiles

- 1** Aluminium post system measures 48 x 48 mm.
- 2** Reinforcement required for customizations with larger dimensions.
- 3** Adapter profiles are compatible with **r+f** frames
- 4** Hollow panels are available for custom labelling (area: 20 mm), design identical to our RASK and RAST models.

Compatibility

Visible widths are explicitly adjusted to the **Quintessenz** steele system. Additionally, **r+f** panels are fully compatible.

Labeling Variants

The Classics QWA - QDA - QFA

They are mostly lacquered and permanently inscribed with slide texts or the digital m-print (material direct print).

The Basic Version QWAI - QDAI - QFAI

The aluminum plate is located behind the protective edge for the flat labeling with attached digital printing foils. Together with the foil, the basic version offers flush fit surfaces with an anti-skid protection. To change labels, the old foil is removed and a newly printed foil is glued. All surfaces are silver matt anodised.

The Multipurpose QWV - QDV - QFV

The multipurpose signs have glass covers protecting transparent or paper inlays. They may help to save costs in case of frequent inlay exchange.

Mounting Models

Wall signs QWA ...

They are equipped with a continuous information carrier on the front side. The special fastening techniques allow flat designs without visible screws.

Banneres QFA ...

They are usually wall-mounted elements, which can be seen on both sides in the longitudinal direction of corridors. They are therefore also called booths or nostrils. They are fixed by means of an adapter rail, which allows a wall distance of approx. 20 mm. The design of the banner shields is also suitable for direct mounting as ceiling panels with low false ceilings. The minimum height of 2.100 mm must always be observed!

Ceiling Signs QDA ...

These signs provide customizable labeling space on both sides. For a ceiling-hanged installation, they come with integrated fine steel wire as well as comfortably adaptable mounting system which also features a variety of anchors for different ceiling materials. These are also deliverable separately.

Example QWA 4260	Example QWA 4260	Individual Measures.
QW Quintessenz Wall signposts. QWA 2 mm Aluminum plains, laquered or anodized. QWAI with integrated detachment protection. QWV non-reflecting-Acryl, support variabel caption inlays.	Height 42 cm. Width 60 cm. The article number indicates merely rounded measures.	Special attachment solutions for exterior installation. Interior lit LED-signs with a depth of only 20 mm.
Article	Standard Measures	Customized Solutions

Signpost ceiling mounted QD

All elements of our quintessenz series follow the principle of a maximally consistent design.

Σ quintessenz

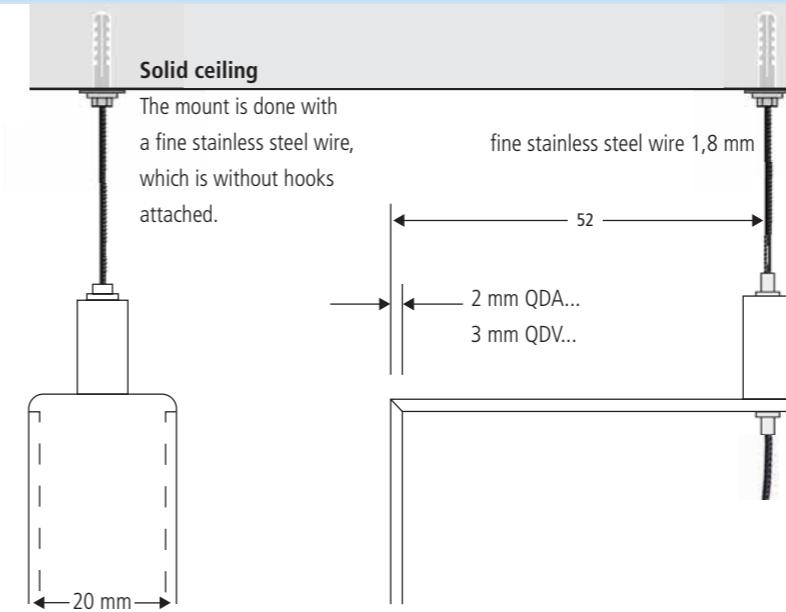

Ceiling signs make the information look seemingly light and weightless, especially when the elements are hung with elegant fine stainless steel wires.

Signpost ceiling mounted QD

The flat standard elements are anchored in the ceiling by variably adjustable fine stainless steel wires.

Σ quintessenz

Mounting

Standard distance from the shield's edge is 52 mm. The clamping device is fixed in tension; pressing the clamping sleeve, the shield can be aligned, adjusted or removed. The end of the wire disappears in the shield's body.

Design types

The ceiling-mounted signs are offered in three different designs. An aluminium version (QDA) is made of fully closed cassettes of 20 mm strength.

The (QDV) version may be custom labelled. It consists of a flexible frame construction, in which acrylic glass (antireflex) are fitted flush on both sides. Its label inlays can be changed.

Standardgrößen

Overview freestanding QM

Unsurpassed flexibility through free choice of location.

Σ quintessenz

Mobile information steles

One of the most versatile components in a guidance system are stelae that can be placed anywhere and are self-labeling. They fulfill their task as an overview or distribution signpost as well as a carrier for event information wherever walls are not available. Temporary information, which is otherwise often presented as unattractive provisional arrangements, is given a professional framework and thus follows the appearance of the building. Updates can be carried out immediately and as needed. The fast and uncomplicated self-labeling and free choice of location offer the user numerous possibilities without having to rely on external service providers. (Photo shows version as optional equipment with built-in roller.)

01.2021 © www.meng.de

Overview freestanding QM

Individual and uncomplicated self labeling.

meng
signsystems

Σ quintessenz

Type of construction

The most frequently used model has a height of 2,000 mm and a width of 420 mm (total width 434 mm). It is equipped with three DIN A3 interchangeable modules on the front side, the other surfaces on the front and back side are closed with metal panels flush with the surface. The header panel above the modules can be labeled with a logo or pictogram.

Side view

The slim design is made possible by a system profile that is only 48 mm narrow, has minimal edges of 4 mm and is anodized silver as standard.

Self labeling

As an alternative to A3 paper, we offer semi-transparent films that allow light- and moisture-resistant prints with longer durability.

Variants

In addition to the standard Joker, other heights, widths and double-sided use with interchangeable modules are also possible.

Foot

Two L-shaped angled steel plates with 6 mm thickness provide stability. Surface and edges of the stainless steel version are finely brushed. A felt sole on the underside avoids scratches on sensitive floors.

Swing out roller

An optional swing-out castor hidden in the base element serves as a perfect transport aid. When folded out, the Joker can be easily rolled away.

Flag sign QF

For immediate location of important spots in vast building complexes.

Σ quintessenz

Flag signs are wall mounted elements that can be used on both sides. They allow elevators, staircases, toilets and registrations to be found quickly, especially in corridors or long buildings.

Flag sign QF

Mounting stability without visible screws and wall flanges.

Σ quintessenz

quintessenz flag signs can always be written on both sides. They can be mounted as wall or directly attached ceiling flags. Production programs are stored for the standard dimensions. Individual dimensions are possible: long, narrow cantilevers are, however, subject to great leverage; they

should be avoided for reasons of stability, especially on lightweight walls.

Outdoor applications

must be designed on request due to wind forces and for larger designs with internal frames.

Also possible as direct ceiling mounting

Interchangeable module QVM

Interchangeable lettering – The frameless interchangeable modules provide 100% graphic.

Σ quintessenz

100% Graphic

The only interchangeable module in all DIN formats for self-labeling and safe replacement. The thermally induced expansion of the pane is compensated with spring-loaded stainless steel edges. This innovation has received numerous awards, including the German Federal Design Prize. The frameless design makes the **quintessenz** principle a role model in the signage industry to this day.

Designpreis der Bundesrepublik Deutschland 2002

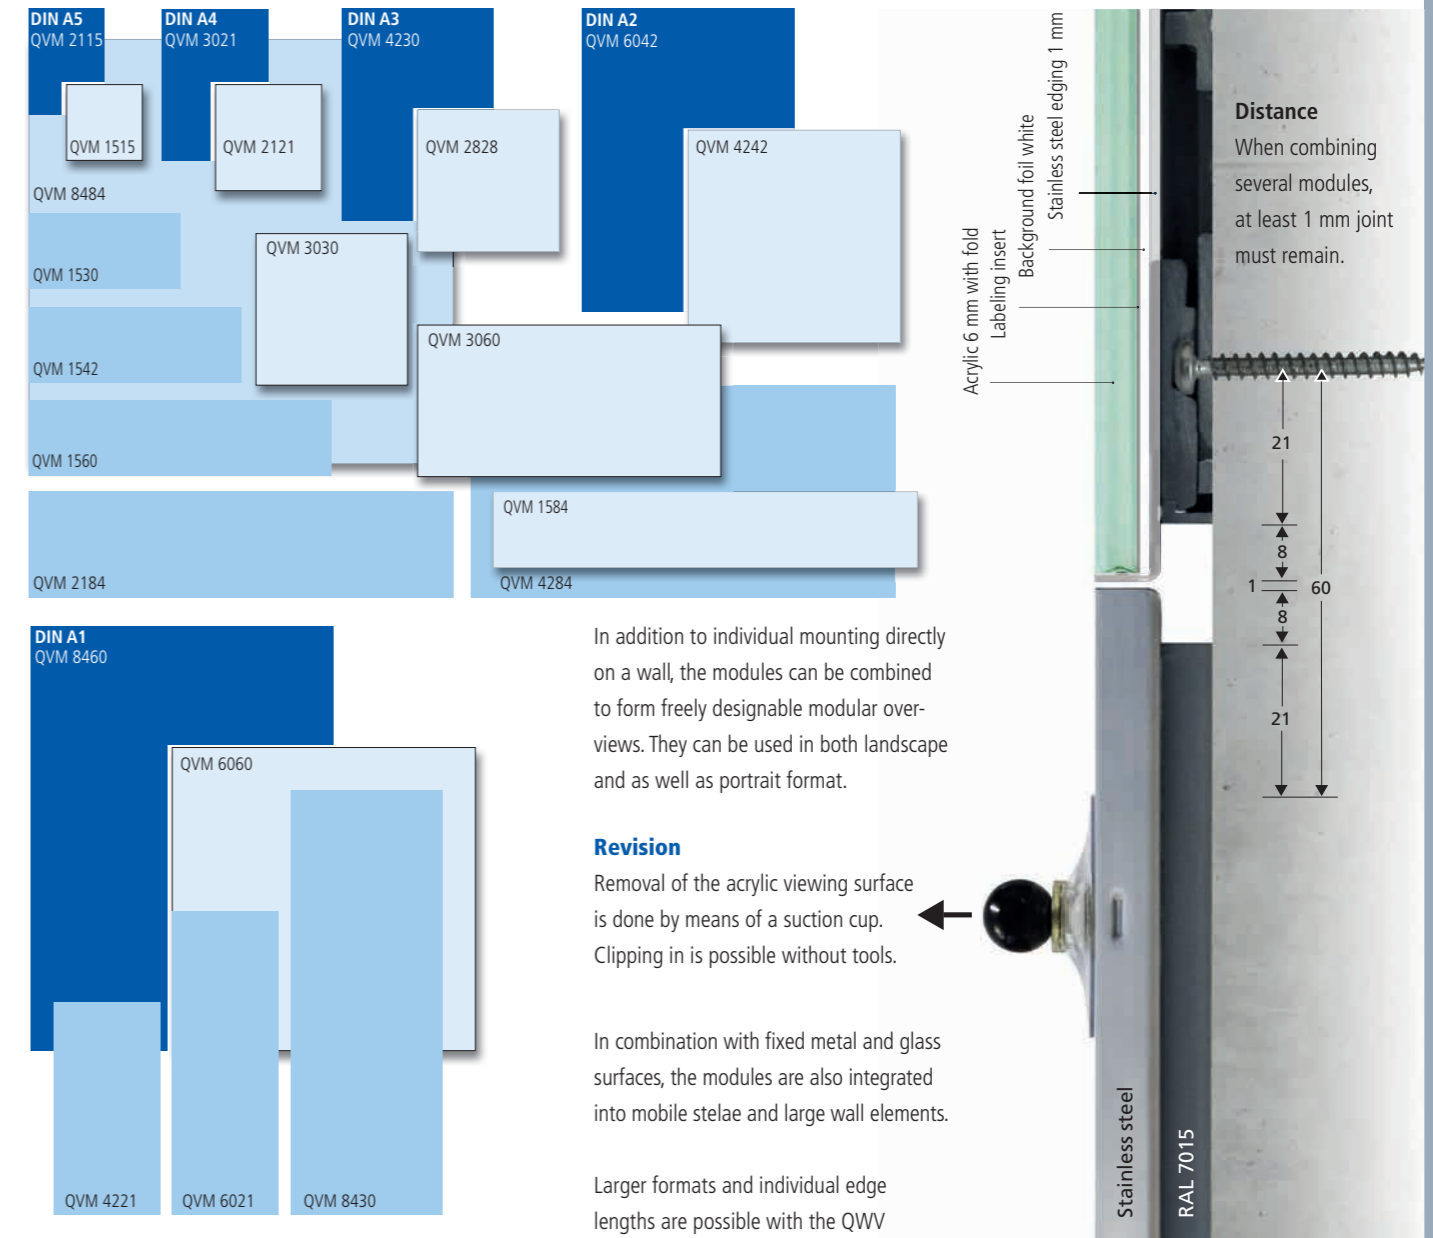

02/2022 © Europäisches Patent 1152 385 | www.meng.de

Interchangeable module QVM

The spring-loaded protective edges made of stainless steel are patented.

Σ quintessenz

In addition to individual mounting directly on a wall, the modules can be combined to form freely designable modular overviews. They can be used in both landscape and as well as portrait format.

Revision

Removal of the acrylic viewing surface is done by means of a suction cup. Clipping in is possible without tools.

In combination with fixed metal and glass surfaces, the modules are also integrated into mobile stelae and large wall elements.

Larger formats and individual edge lengths are possible with the QVV design. It has aluminum protective edges with a depth of 20 mm.

Article description	Size	Variants	Customized
QVM 4230 stands for quintessenz Variable Module	42 Height in cm 30 Width in cm The standard dimensions refer to the paper formats. The outer dimensions of the modules are 4 mm larger.	DIN formats and squares In addition to the DIN formats, all edge dimensions can also be combined to form square modules, e.g. 280 x 280 mm. The possible edges are 150, 210, 280, 300, 420, 600 and 840 mm long.	Special dimensions that deviate from the existing edge lengths are not possible due to the tooling. Screw mounting is standard. Adhesive mounting QVMK possible on request. The modules are only conditionally suitable for use in free weathering.

Flat show case QVF

Lockable, protected notice boards are part of the organizational duties at every facility.

Σ quintessenz

The hinges of the glass sash and also the locking mechanism are hidden behind the metal front panels. The security lock is embedded in the lower right corner in such a way that the viewer does not notice it visually.

Flat show case QVF

A continuous frameless signage system also includes poster display cases with minimal edges.

Σ quintessenz

In most cases, changeable modules and bulletin boards are the most appropriate elements for posting notices and announcements. For internal job postings, mandatory information or in cases where notices need to be changed constantly, a lockable display case may be necessary. There are numerous makes on the

market, which usually have a stout frame and corresponding, less elegant construction thicknesses. The solution within the **quintessenz** system naturally claims to fit the system reduced to the essentials, although hinges, locks and other mechanical components must be „hidden“. For this reason, **quintessenz** flat display cases are always equipped with a fixed, inscribable head and foot panel. The door leaves are hinged on the left, while the lock is integrated on the right.

QVFA 11570
for DIN A1 or
9 sheets DIN A4

QVFA 14690
for DIN A0 or
16 sheets DIN A4

Dimensions

The two system widths 600 and 900 mm are standardized. The total heights are between 1,140 and 1,440 mm, with the head panel requiring min. 150 mm and the bottom closure panel min. 75 mm. The construction thickness is 48 mm, the additional wall distance is usually 4 mm.

Type of construction

A transparent pane of 5 mm thick ESG glass is only set at the top and bottom, the vertical, free edges are ground. Interiorly, a closed, white magnetic plate is embedded. Information and posters can be fixed on it with magnets. A steel perforated plate for optional use of magnets or pins is also available. The flat display cases are lockable with cylinder locks on the lower edge, outside the visible surface. The sides are smoothly closed. This makes it possible to mount several showcases directly next to each other.

Doorplate with folding spring STF

Overview exterior pillars SA

Convex pillars for a significant wayfinding.

Overview exterior pillars SA

Convex pillars with interchangeable surfaces on both sides surfaces for individual design.

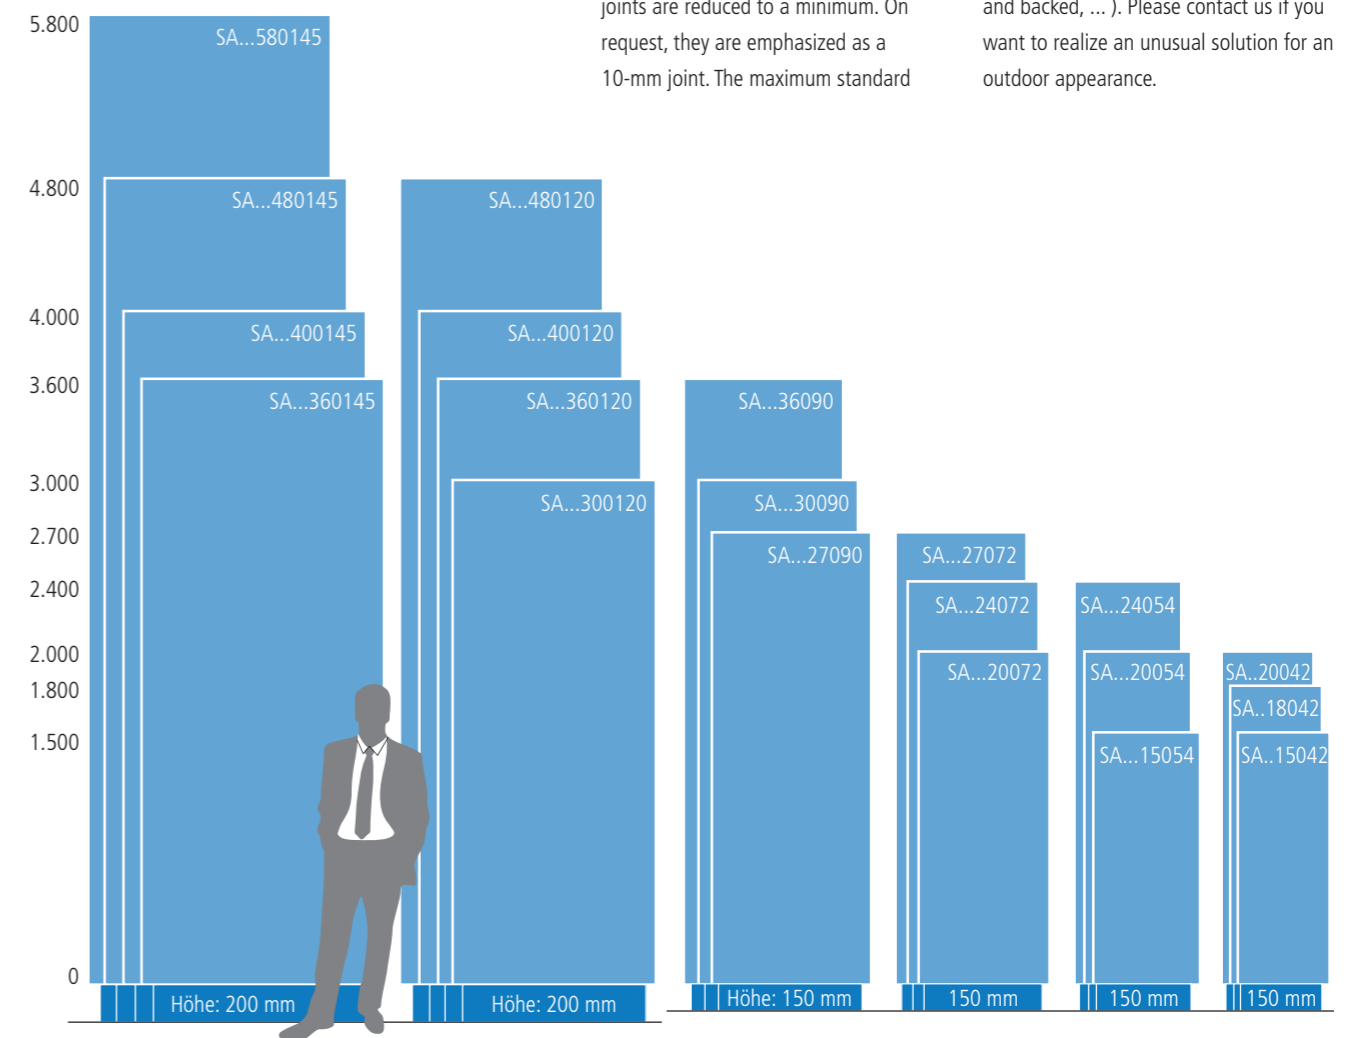

The convex pillars in the outdoor area are among the most striking elements in **system sieben**. The visible surfaces of the columns can be freely designed and are thus ideally suited for visualizing a company's corporate design.

The exterior signs consist of the system profiles and curved surfaces stretched between them. The base is made of stainless steel sheet (grain 220, cross-ground) as standard; a base made of square-hole sheet (stainless steel) is also available at an extra charge. The signs have an internal stiffener made of

galvanized steel and a top cover. Metal faces must be subdivided from a height of 2,000 mm. Signs with metal surfaces are possible up to a height of 6 meters. The maximum height of individual metal panels is 2 meters. The required material joints are reduced to a minimum. On request, they are emphasized as a 10-mm joint. The maximum standard

width of the visible surface is limited to 1,450 mm for material reasons. However, wider elements are possible as made-to-measure products. The lettering is done by foil text, as a special production further variations are possible (decoupled and backed, ...). Please contact us if you want to realize an unusual solution for an outdoor appearance.

Important:

Actual viewing height is equal to height plus base (200 mm or 150 mm). The installation depth is another 150 mm between the foundation and the floor surface.

Exterior pillars SA

Convex pillars for a significant wayfinding.

Exterior pillars SA

Convex pillars with interchangeable surfaces on both sides surfaces for individual design.

The convex pillars in the outdoor area are among the most striking elements in **system sieben**. The visible surfaces of the columns can be freely designed and are thus ideally suited for visualizing a company's corporate design.

Outdoor signs have a particularly important function, as they are responsible for the first impression they convey to visitors, customers, suppliers and employees the self-image and competence of a company or institution, in addition, of course, they should show the right way. The slender columns from **system sieben** harmonize equally well with the exterior design of both modern and historical buildings. The elements can be equipped in a wide range of possibilities. The stretched surfaces are permanently labeled in screen printing or with adhesive text, floor spotlights put the information in the right light. Other interesting effects can be achieved with internally illuminated elements or with decouped and laid-out lettering. However, a slender proportion should always be maintained, with the height reaching at least three times the width dimension.

Important:

For internally illuminated columns, there are partly limited dimensions and illumination areas due to the internal construction. Please coordinate this with us during the design phase.

Outdoor signs

High-quality equipment, durable. Connecting parts made of stainless steel, an internal, stable bracing made of galvanized steel profiles and the base part made of stainless steel sheet (as an optional extra also stainless steel square perforated sheet) are standard. The sizes up to 900 mm visible width and 3,000 mm height form a wind load-stable group that can be used without further static proof.

Mounting

The small and medium-sized signs are bolted to the foundations with heavy-duty anchors. For large signs, anchor baskets can be supplied at an early stage, which are cast into the foundations on site. Acrylic surfaces can be up to 3,000 mm high and are not subdivided.

Lighting

For internally illuminated signs, the supply cable is inserted from below. The cable (3 x 2.5 mm) must be available at least 1 m beyond the foundation. For revision purposes, illuminated columns are equipped with doors or with removable surfaces.

Overview freestanding SM

Freestanding stele, which can be easily and quickly moved to the desired location at any time.

Overview freestanding SM

Can be used in any place without problems, even without a wall or ceiling.

Overview freestanding

One of the most versatile components in a signage system is a stele that can be placed anywhere. They fulfil their task as an overview or distribution signpost as well as a carrier for event information wherever there are no walls. Temporary information, which is otherwise often presented as unattractive provisional solutions, is given a professional framework.

Overview panels do not always have to occupy large wall surfaces. In many cases, a free-standing information stele has a more discreet effect as a house overview and also takes on an object character.

In the entrance hall next to an information counter, a slender column leaves enough space; next to self-supporting staircases or on glass lifts, it fulfils the function of a floor overview. Integrated schematic floor plans can facilitate orientation.

Thanks to its versatility, the mobile info stele in **system sieben** is ideal for a house overview. The labelling with adhesive text allows the contents to be updated quickly and cost-effectively, while the continuous surfaces offer the advantage of free graphic design options. A modular design in which individual segments can be exchanged is also possible.

Draufsicht

Freestanding, mobile column

Due to the width of 420 mm, it is also possible to integrate interchangeable modules for DIN A3 sheets in landscape format (technical description in the Variable Information).

The base plate unit made of powder-coated steel forms a centre of gravity that gives the element stability. Soles made of semi-rigid plastic provide safe scratch protection. For sensitive, smooth floors, a felt covering can be ordered at no extra charge.

Overview freestanding SMV variable

Freestanding stele, which can be easily and quickly moved to the desired location at any time.

Overview freestanding SMV variable

Can be used in any place without problems, even without a wall or ceiling.

Overview freestanding variable

One of the most versatile components in a signage system is a stele that can be placed anywhere. They fulfil their task as an overview or distribution signpost as well as a carrier for event information wherever there are no walls.

Temporary information, which is otherwise often presented as unattractive provisional solutions, is given a professional framework.

This mobile info stele with interchangeable modules on both sides is a joker for individual self-labelling. The **Joker** can be set up for an event and then removed again - an information element could not be more flexible.

The use of the **Joker** is particularly recommended when larger crowds need to be informed or guided, because it sends out an unmistakable signal. Thanks to the perfect interplay with the other elements of the guidance system from the **system sieben** series, the **Joker** shows that even highly topical information can be communicated in a representative and elegant way.

Joker

The standard module size is to the DIN A3 landscape format (297 x 420 mm). Special designs in other heights and widths are possible with this technology.

As a system variant, the Joker is also available with a viewing width of 585 mm for DIN A2 landscape and DIN A1 portrait formats. The header module can hold permanently labelled information, e.g. a level or hall designation. Company logos can be printed permanently on the acrylic back or likewise changeably on the foil or paper insert. The stele is available in a similar design without interchangeable modules with surfaces that can be permanently inscribed. Article number of the example: SMV 20042 S for silver anodised system profiles.

The standard elements are anchored in the ceiling adjustable fine steel cables in the ceiling.

meng
signsystems

system sieben

Ceiling signposts – like actually all overhead mounted construction elements – should appear as light as possible for psychological reasons. In the **system sieben**, this problem is solved by tensioned, flexible surface materials. The ceiling signs are equipped with two surfaces so that they always hang balanced and straight. The infinitely adjustable fine steel cables provide a sophisticated, professional solution for the ceiling connection. Sophisticated mounting options exist for each design, requiring a minimum of installation time.

Signpost wall mounted SW

Problem-free and individually applicable for indoor and outdoor use.

Signpost wall mounted SW

Various materials with permanent lettering for lasting information.

The **system sieben** wall-mounted signposts are available in a variety of different dimensions. Depending on the size, they include one or two side profiles for mounting. The surface design of the signs with lettering, signs, arrows, color and graphics can be individually adapted to the customer.

The stretched surfaces of the wayfinding signs in **system sieben** can be selected from a wide range of materials and surface variants. Matching the semi-transparent opaque films of the door signs, the signposts are available in the same material look with curved acrylic panels. A special strength are the universally applicable signposts in DIN formats. The asymmetrical signposts for DIN A4 widths have an interesting effect. These elements, which appear particularly transparent and weightless, are fixed on one side and are equipped with a floating acrylic folding spring, while the larger elements have system profiles on both sides.

Standard sizes

Data in mm	420	540	590
180	SW..1842	SW..1854	
240	SW..2442	SW..2454

Doorplate with folding spring STF

Individual and flexible design options of the entire acrylic surface.

This doorplate combines many design options for the customer. Through the simple and individual exchange of the inserts, the door sign can be quickly and flexibly adapted to changing situations and areas of application. Thus, an update of the information is inexpensive and quickly feasible.

Doorplate with folding spring STF

Innovative doorplates for independent replacement of inserts.

The door plate in **system sieben** represents a new development in form and technology with its asymmetrical mounting. The sign's shape is highly conducive to our reading habits, while the retaining profile offers the eye peace

and guidance. The design of the information surface can unfold unhindered. The taut shape of the acrylic folding spring gives the information a three-dimensional format; it lends the sign lightness and a transparency that meets high design requirements, especially in the representative area. The inscription of the semi-transparent foils in the in-house laser or inkjet printer

makes the user independent, an update is inexpensive and quickly executed. An interesting multi-layered effect is achieved by additional back printing of the foils with colored elements.

Handling

The curved folding spring for inserting the labeled foils is a folded pocket made of acrylic glass with a thickness of 2 x 2 mm. A clamping screw secures the folding spring in the profile and prevents unauthorized opening of the sign; this is only possible with a system key. With a standard visible width of 180 mm, the door sign is offered in three different heights. Article number of the example: STF 18 S (with silver anodized system profile)

Mounting

A mounting rail is anchored in the wall with screws and dowels. The lateral system profile is pushed onto the mounting rail, closed with the front cover and secured.

Doorplate with clamp function CTAKN

Doorplate with interchangeable slide CTAW

Interchangeable module CW

Doorplate CTA

... the timeless modern classics.

ceform

meng has been using the insert-signs system successfully for more than 25 years. With the **ceform** door sign, they are now defined as a part of the quintessenz system. This technique can be used wherever a simple labeling change is required.

Doorplate CTA

The functional design of the ceform series allows the classic insertion technology.

ceform

Adhesive mounting CTAK

In most cases, the more cost-effective adhesive assembly CTAK is sufficient, in which the back of the shield is equipped with tape strips. Adhesive rings sheets are available for glue mounting on glass surfaces, which cover the otherwise visible adhesive strips from the room side.

Screw mounting CTA

Screw mounting CTA, every sign is attached with 2 screws.

Cover plates

In addition to the lightest equipment with a 1.5 mm thin clear lens, a flush surface cover with a step fold in 3 mm anti-reflective plexiglas is also possible. The visible edges are matte sawn or milled. The highest quality diamond polished edges are made of green shimmering glass-clear acrylic.

Vertical arrangement

The **ceform** door sign can also be used vertically. In this case an additional stop is required at the lower edge.

Width dimensions

Simple in construction, yet significant made of metal and acrylic glass. Apart from the square door sign with a height of 150 mm, other widths are also possible. For larger formats with an 8 mm profile thickness, a separate data sheet is available.

Interchangeable module CW

Large-format slide-in signs and interchangeable modules for self-labeling with uncomplicated technology.

ceform

Portrait or landscape format?

It's all a question of your design! The insert profiles can be joined together in pairs to create individual dimensions. So that simple paper inserts remain easy to change, we have defined the DIN formats as standard. The combination of aluminum and glass is particularly stable and complies with fire protection class A1, non-combustible. It is predestined for escape route plans.

Interchangeable module CW

In addition to the CTA doorplate profile with 150 mm width the CW profiles also allow for larger formats.

ceform

Example with 4 mm toughened safety glass

Portrait arrangement

A lower stop edge is required here to ensure that the pane and inserts are held securely.

Landscape arrangement

The transverse formats are standard. The pane and inserts are secured at the top centered at the top to prevent them from being pushed out.

Insertion surfaces made of glass, acrylic glass and aluminum

Cover panes made of 4 mm acrylic glass to protect self-labeled inserts are standard. Tempered glass panels made of 4 mm toughened safety glass are also available for increased fire protection requirements. Metal surfaces with fixed lettering can be offered for special applications, e.g. outdoors.

Aluminium profiles silver anodized

The profiles basically have a hard anodized surface. On request, the outer visible surfaces can be painted in color; inside they remain silver, as does the continuous support plate. To conceal the wall mounting screws, a white insert is integrated as a neutral background.

Standard widths

These are dimensioned so that insert sheets in DIN formats fit in without trimming. The profile edge covers the insert by only 4 mm per edge. Individual dimensions are also possible on request.

Special dimensions

Apart from DIN formats, individual dimensions and alternative insertion plates are possible. The maximum possible size of the cover plates depends on their material stability.

- Acrylic glass 3 mm antireflex = max. 420 mm
- Acrylic glass 4 mm crystal clear = max. 600 mm
- Toughened safety glass = max. 840 mm

Doorplate OTA

Doorplate OTA

Maximum latitude with creative formal language and minimal use of materials.

optimal

Less is more

Very slim depths, combined with a reduced use of materials, don't limit the creativity in shape and color at all. With clear window for the exchange of individual inscriptions or completely without windows, as a full-surface sign, for permanent information.

Doorplate OTA

The optimal door sign made of aluminum in a particularly flat design.

optimal

Save and flexible

Optimal describes a product line made of metal, which largely corresponds to the fire protection class A1, non-flammable. The minimum content of the polycarbonate disc is B1, hardly inflammable. Therefore the sign system is optimally equipped for use in sensitive escape route areas. In addition to the cost-saving standard form, the creativity in shape and color are unlimited. Feasibility and resulting manufacturing costs are agreed with the planer. The very slim depths, combined with the reduced use of materials, meet the specifications of modern architecture.

Individually

To exchange individual labeling, the door sign is optimally equipped with a transparent window. The laterally inserted writing media are concealed secured against removal. To update the info plate on the special plate is removable from the wall. Alternatively, if the next has been permanently pasted with foil text or digital printing, the windows pane can be completely omitted. For wall mounting, the door sign is optimally prepared either for dowel mounting or for sticking.

Overview wall mounted TNU

Signpost wall mounted TNW

Doorplate sandwich clip TNTSC

Overview freestanding TM

Overview wall mounted TNU

Transparent floating information convey lasting elegance and value.

□ transparenz

Compared to the classic glass signs with four fastening screws, the signs in the system **transparenz** impress with their concealed fastening. They give the inscription area a transparent, floating appearance, which is the special attraction of the glass signs. The materials comply with **the highest fire protection class A1 – non-combustible**.

Overview wall mounted TNU

The innovative glass clamping function without glass drilling and visible screws.

□ transparenz

In a signage system, overviews show all reachable destinations and facilities. The size of an overview panel must be selected depending on the complexity of the object. Transparent surfaces made of glass, acrylic glass or even completely different material up to 8 mm plate thickness offer the planner diverse and creative solutions.

Standard sizes

Data in mm	210	297	420	594	841	1,189
448						
622						
869						
1217						

The overview boards

consist of an information surface with two holding profiles. They are standardized in various formats. Securely anchored to stable walls, the holders are suitable for areas of up to approx. 1 m² with a weight per unit area of approx. 20 kg for 8 mm toughened safety glass. With significantly lighter acrylic glass, formats up to 1.5 m² can usually be fastened without problems.

Customized products

may vary in height / width ratio. Very large glass elements must in any case be held with special constructions. Surface stability, weight and wall anchoring must always meet the static requirements. Our customer consultants coordinate these with the planner on site.

Article description	Type	Surface material	Size	System profile color
TNU describes the transparenz overviews	... Standard: 8 mm acrylic sheet S Sandwich construction: two 4 mm panes (only ESG glass possible)	ESG ESG glass K Crystal clear acrylic G Glass look acrylic	122 Height in cm 119 Width in cm	S Silver anodized L Lacquered

Signpost wall mounted TNW

Transparent floating information convey lasting elegance.

□ transparenz

Compared to the classic glass signs with four fastening screws, the signs in the System **transparenz** impress with their concealed fastening. They give the inscription area a transparent, floating appearance, which is the special appeal of the glass signs.

Signpost wall mounted TNW

The innovative glass clamping function reduces the installation intervention in the building structure.

□ transparenz

„Signpost“ is the general term for directional signs, most of which have directional arrows to show the way. Inside buildings, wall-mounted even the rule, wall-mounted at eye level. Particularly elegant and light are perceived cantilevered, transparent signposts, which are held with only one profile. However, the required stability limits the possible height. To differentiate, we define the larger formats with two horizontal holding profiles as „overviews“ (TNU).

Version

Analogous to the door signs, there is also a version with two panes for the wall signs. This sandwich construction allows the use of self-labeled text inserts. The exchange of the insert is done with the help of a system tool.

Dimensions

However, with all possible combinations, secure fastening must always be ensured. For example, we recommend holding surfaces with a height of more than 298 mm with two horizontal profiles. Larger surfaces, which are always held with two profiles, are declared as overviews (TNU).

Combinations

In addition to the usual standard formats, we can also respond to your own wishes and combinations.

Standard sizes

Doorplate sandwich clip TNTSC

Floating transparency, high-quality materials and tool-free label change.

□ transparenz

Compared to the classic glass signs with four fastening screws, the signs in the **transparenz** system convince with their clear, concealed fastening. They give the inscription area a transparent, floating appearance, which is the special charm of the glass signs.

Doorplate sandwich clip TNTSC

Label change with a fingertip. The spring-loaded closing glass pane is unique.

□ transparenz

Transparent doorplates are ideal for modern glass architecture. Glass signs with two or four screws are therefore seen „on every corner“. A major disadvantage of most systems is the inconvenient replacement of the lettering. To open the four screws already requires patience. The screws can fall off or even the whole glass pane. The new lettering insert must be precisely perforated to fit, and precise spacing must also have been used beforehand during installation. The sandwich clip door label of the **transparenz** system is an ingenious innovation! A fingertip is all it takes to change the text insert.

Clipfunktion

The ingenious spring mechanism requires only minimal space in the pair of aluminum retaining profiles. The locking force can also be adjusted so that the movable cover disc either remains firmly closed or can be opened easily with the index finger. It goes without saying that all parts remain on the wall and hands free when changing inserts.

Also available with integrated change slider glued to the door plate, which impresses with its simple function. (TNTSCW)

Standard sizes

Data in mm	150	180
	150	150

	220	160
	TNTSC 2215	TNTSC 1621

Dowelled screw mounting

in solid masonry, concrete or stud walls is standard. Vertical profile mounting is also possible. The glass panes are sandwiched for sandwiching a printed insert of paper or foil. The area dimension is 1 mm longer than the aluminum profile for faceted materials. Both panes are securely connected with one half of the profile each. The clamping can be adjusted from the bottom edge. In addition to the temporary text insert, the metal profile can also be labeled. Room code, company logo and also Braille are thus permanently preserved.

Overview freestanding TM

Transparenz offers ease in the communication of information.

transparenz

Depending on the graphic design, transparent information carriers show depth, plasticity or lightness in the transmission of information. Double-sided readability is achieved with a light-blocking cover made of foil. In the case of neutral backgrounds, the use of type carriers that remain crystal clear is possible.

01/2021 | © | www.meng.de

Overview freestanding TM

The mobile stand-up signs with transparent value.

meng
signsystems

transparenz

Safety glass

The use of tempered ESG single-pane safety glass or VSG laminated safety glass consisting of 2 panes with an intermediate film is required on site. The glass thickness must correspond to the surface dimension and its clamp fastening.

The ESG version

with clear panes leaves all design options open to the graphic designer. A number of high-quality foils are available with which the back can be individually covered, even semi-transparently. If the green tint typical of glass distorts the colors, we recommend using white glass (optiwhite). It has a reduced green tint.

The VSG variant

is equipped with a matt, semi-transparent intermediate layer, which provides the neutral background for lettering with film text. However, since the glass layers of the commercially available laminated glass are not tempered, the risk of breakage is higher than with the harder single-pane safety glass, toughened safety glass.

Doorplate PVT

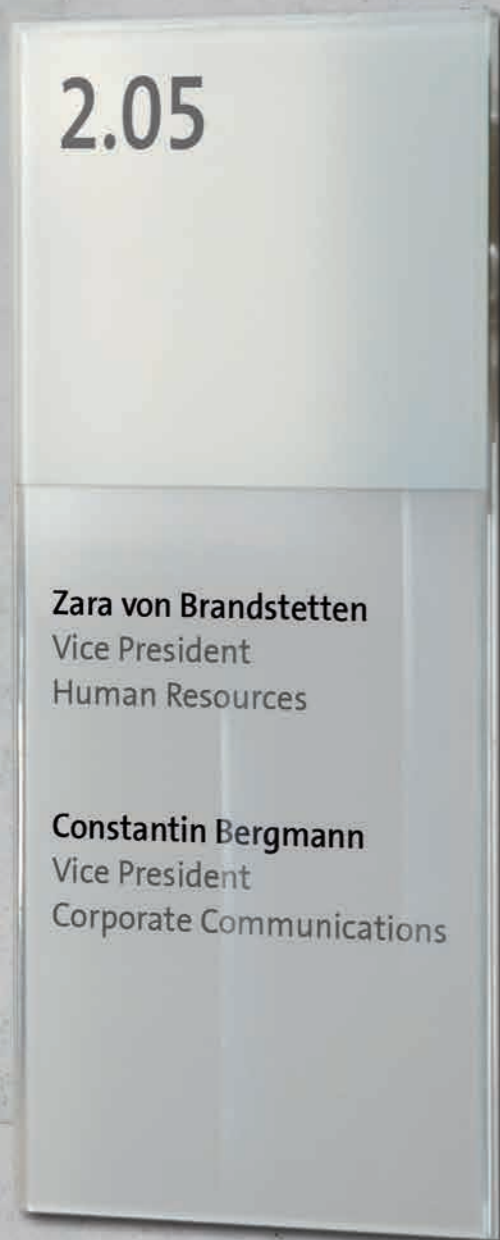

Signpost wall mounted PVW

Doorplate PVT

The glass doorplate primavetro combines optimal function with pure design.

primavetro

primavetro needs neither frames nor visible holders. The attachment is hidden behind a back coat of paint. Their standard color is a neutral light gray, nearly Pantone 427. The structure is also chosen so flat that the wall bracket is barely perceptible even from the side perspective. Together with the transparency of the free-floating part it creates a floating glass look.

Doorplate PVT

The tool-free change of inlay foils is hidden behind an amazing simple technique.

primavetro

Slim building situations

primavetro was developed for limited space next to the doors of modern glass partition systems. The glass cover is therefore removable to the front. **primavetro** offers an advantage wherever lateral pushing out is impossible on site.

Toolless change

The ones who knows the function, open the front glass with two fingers and no effort. It is almost impossible that the disc accidentally falls to the ground. A magnet locks the lock and secures the glass.

100% graphic surface

The division is done in golden ratio. For design **primavetro** offers a color-covered area, which can be labeled on the front side. The self-inscribed foil is inserted between the transparent surface of the front white glass panel and a fixed acrylic panel behind it.

Frameless construction

A sandwich made of two transparent panes with inscriptions on foil or paper inserted in between is part of the proven practice. With the previous, only 8 mm flat mount, **primavetro** sets new standards.

Article	Size	Variants	Customization
PVT 1809	PVT 1809		
PVT designates the primavetro door sign	18 height in cm 09 width in cm	The color surface can also be defined to suit the interior design. Fixed labels behind glass are also possible on request.	Non-standard dimensions require additional tools and correspondingly longer delivery times. The feasibility must be technically adjusted.

Interchangeable glass modules PVW

Elegant appearance of floating glass surfaces with unique mounting and optimum function.

primavetro

Floating appearance

primavetro requires neither frames nor visible brackets. The design is so flat that the wall bracket is barely noticeable, even from the side. Together with the transparency of the cantilevered part, this creates a floating glass look.

Paper-flexible labelling behind glass with 100% graphic area

meng
signsystems

primavetro

The glass cover plate can be removed to the front. One benefit of **primavetro**, wherever lateral sliding out is not possible on site. The tool-less change of the label foils is hidden behind a simple technique.

Tool-free replacement

Only those who know the function will be able to open the front glass pane with two fingers and without exerting any force. It is almost impossible for the pane to accidentally fall to the ground and break. A magnet locks the catch and secures the glass permanently.

Frameless construction

A sandwich consisting of two transparent panes and a label inscription on foil or paper inserted between the two panes is the proven practice of the trendy glass sign. With the set-back, only 8 mm flat holder, **primavetro** sets completely new standards.

100% graphic area

primavetro offers sufficient graphic space for individual graphic area. The colored backed area can be labeled with logo and text information on the front. The film in A4 format, which is inserted between the transparent surface of the front white glass panel and a fixed acrylic panel behind it, is suitable for self-labeling.

Narrow building situations

The **primavetro** sign system blends harmoniously into the architecture of modern buildings. It was developed for limited surfaces of modern glass partition wall systems.

Mounting

The mounting unit can be mounted on concrete, masonry or plasterboard walls or with double-sided adhesive tape to glass or metal surfaces.

PVW 3021	PVW 3021		
PVW PVW stands for the primavetro direction sign	30 height in cm 21 width in cm	The holder is hidden behind a panit layer. Its standard color is a neutral light grey (similar Pantone 427)	The measure 69 mm cannot be undercut. The maximum glass height is 300 mm, the maximum glass width is 420 mm.

...we set trends in signage and orientation systems.

From a single source

Consulting and conception

Planning and control

Design

Production and installation

Guarantee of long-term availability.

How can we support you with the guidance system project?

With our network, we take care of all the steps from consulting and needs assessment to design and coordination and coordination with all those involved in the process through to production and installation on site.

The conceptual implementation of the guidance system is created on the basis of your own specifications or according to our coordinated planning. All the necessary steps are implemented after an on-site assessment of the actual situation, taking your wishes with full cost transparency.

Example scope of planning from practice

- on-site consultation of the requirements with the responsible contact persons
- the detailed localization of the possible signage locations in current building and site plans provided by the current building and site plans provided by the customer
- the creation of a corresponding legend and a signage catalog
- the creation of layouts on the basis of jointly jointly defined text content
- the production of exemplary photomontages
- the presentation of the concept on site
- after the presentation, your customization requests are incorporated into the concept and the layouts are updated

Low follow-up costs

The uncomplicated updatability of the lettering or individual sign parts is standard at meng.

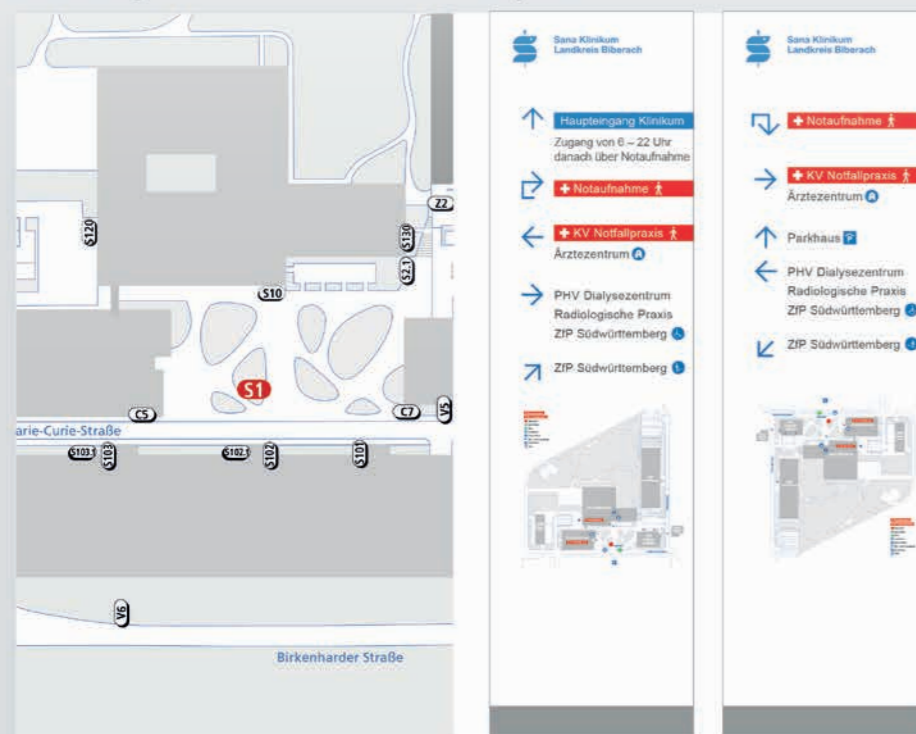

The high-quality materials can withstand the normal wear and tear for decades. Thanks to industrial production and careful data archiving, we guarantee long-term availability.

At the same time, the planning serves to create print-ready lettering data for later implementation. The resulting designs are realized by our graphics and production staff according to your OK. Communication based on trust and the realization of your wishes are particularly important to us.
