

Transparenz at a glance

Flexible solutions made of glass and metal.

transparenz

The variety of company logos on a house overview does not necessarily have to appear confusing. With the paper-flexible interchangeability of tenant lettering, modular overviews are particularly economical to update. We will be happy to advise you on your individual task.

Transparenz at a glance

The standard components of the transparenz system building kit.

transparenz

With the standardized profile lengths based on DIN dimensions and the corresponding surface formats, we offer control system planners a construction kit for their creative design. Glass up to 8 mm is the predominant surface material. However, other materials up to this thickness are also conceivable. The retaining profiles are in two parts and are equipped with a concealed clamping function. This makes it possible to first anchor the calf profile to the wall and then apply the cover profile. The profile height is exactly 30 mm, the total construction depth is a slim 16 mm.

The transparency clamping profiles are used in standard products as:

- T =** Door plate always with a system profile crosswise at the bottom.
- W =** Wall signpost with a profile at the bottom crosswise.
- D =** Ceiling signposts always with a system profile across the top.
- F =** Flag signpost with a vertical profile.
- U =** Overviews always with two horizontal system profiles.
