

## Table stand transparenz TNVT

The first impression of your visitors counts. Transparency is not just a system.

### transparenz

The visitor's second glance is directed at the nameplate on the reception counter. Just as we perceive people and associate characteristics with the first impression, we also weight the value of the ambience. This is especially true for objects with visual messages. Glass and metal combined with the amazingly simple technique of changing the inscription convey the personality of the name, matching the interior.

## Table stand transparenz TNVT

Glass and metal – combined with the amazingly simple technique of changing the inscription.

### transparenz

#### Label change

Of course, the tabletop display also features the innovative technology of the transparenz system. Protected between two cantilevered glass panes, your individually designed inscription on semi-transparent opaque film can be exchanged in no time at all – without tools, of course, and with a self-closing, concealed technology.

#### Material

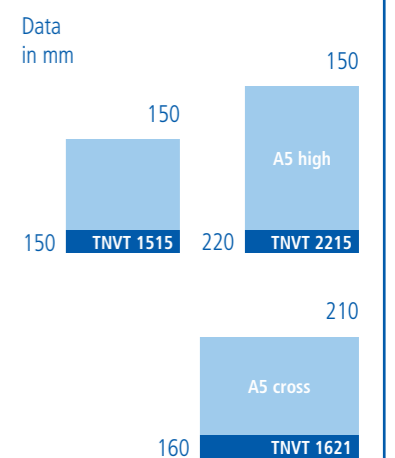

The table display's panes are available in three different materials, float glass, glass-look acrylic and clear aryl glass. The

holder and the base plate are made of 4 mm thick aluminum and painted according to RAL or with special color shades.

#### Formats

The system offers three commonly used formats as standard, but custom dimensions are also possible. The inclination of 15 degrees contributes to a balanced stability. To protect the furniture surface the support surface is equipped with a sliding sole.

#### Standard sizes
